Point-by-Point Response to the Technical Check

Manuscript: Does disagreement between LLM-inferred and actual star ratings predict review helpfulness? Evidence from three language models and 26,000 Amazon reviews

Manuscript ID: b16c5ef9-ff44-4a3f-ba6f-b98b273ebfdf v1.0

Journal: *Marketing Letters*

We thank the Editorial Support team for the technical check. We made only the requested changes and did not alter the content of the manuscript. Each point is answered below.

Point 1: Length limits

Requested: Manuscript text of no more than 5,000 words including abstract, main text, and references; abstract of no more than 150 words; up to four tables and/or figures; supplemental appendices of no more than 2,000 words.

Response: The manuscript complies with each limit. The main text and the references together contain about 4,230 words, tables and table notes excluded, and about 4,370 words with the abstract (4,930 words if the four tables and their notes were also counted). The abstract has 137 words. The manuscript has four tables and no figures. The online appendix has about 1,980 words including its tables. We did not change the text in response to this point.

Point 2: Abstract and keywords

Requested: Place the abstract and keywords in the Title Page item and remove them from the main blinded file.

Response: Done. The abstract and the keywords now appear on the title page, and we removed both from the blinded main file. The blinded file now begins with the title and the Introduction.

Point 3: Compliance with Ethical Standards

Requested: Add the compliance statements to the Title Page item, after the abstract: (a) conflict of interest, (b) funding, (c) ethical approval, and (d) informed consent (optional); write “Not applicable” for sections that are not relevant.

Response: Done. The title page now contains a section titled “Compliance with Ethical Standards” immediately after the abstract and keywords, with four headings: Conflict of interest, Funding, Ethical approval, and Informed consent. Sections that do not apply to this study, which uses publicly released data and no human participants, state “Not applicable.”

Other changes

None. The manuscript text, tables, references, and online appendix are unchanged.
